The South Andrews Mobility Hub

A buyer's feasibility study of a 0.88 acre downtown corner assemblage: what the RAC-RPO code allows, how a nine-story parking, retail and office program can be built, what the City will require, and what the land is worth.

38,207 SF

0.88 ACRE CORNER

THE OPPORTUNITY IN ONE PAGE

Executive summary

This is one of the last assembled development corners on South Andrews Avenue, a ten minute walk from downtown Fort Lauderdale and under three miles from the airport. For a car rental operator, it is rare: enough land to stack a fleet vertically, on an arterial, inside a zoning district that already allows the height the use needs.

What can be built

- ◆ The site is zoned **RAC-RPO**, which permits buildings **up to 12 stories**. The buyer's nine story concept sits inside that ceiling.
- ◆ A nine story building delivers roughly **575 to 600 structured stalls** plus ground floor retail and an office or hotel cap, on a 38,207 SF corner.
- ◆ Retail, restaurant, office, hotel and housing are all permitted uses. The rental counter and fleet are accommodated through the building, not against the code.

What it should cost the buyer

- ◆ The seller's 2025 lender appraisal concluded **\$11.1M**. That number leans on tiny infill lots bought under a condemnation threat and on superior downtown tower sites.
- ◆ Adjusted for size, zoning, flood, demolition and entitlement risk, the market-clearing land value is in the **low \$200s per foot**.
- ◆ The disciplined entry is **\$8.0M**, with room to roughly \$8.75M. That basis is what makes the program pencil.

THE RECOMMENDATION

Open at \$8.0M (\$209 per land SF). The path to a nine story mobility hub is real and is laid out in this report: the height is within code, the use is solvable through a permitted mixed-use structure, and the City's likely conditions are answered in advance. At this basis the buyer controls a scarce downtown corner with a clear development thesis, well below the seller's appraisal anchor.

How this report is built

SECTION	WHAT IT ANSWERS
The Site	The three parcel assemblage, dimensions, the Hardy Park frontage, flood, and what is there today.
Zoning & Entitlement	RAC-RPO uses, the height ladder, density, parking, and the pathway to approve a rental and parking use.
Massing & Scenarios	The buildable envelope and three ways to program nine stories, with stalls, keys and square footage.
What the City Will Require	The questions Planning will raise, answered before they are asked.
Valuation	The comps, the buyer-side adjustments, and the recommended offer.

A SCARCE DOWNTOWN CORNER

The site

The property is a single assembled corner of **38,207 SF (0.88 acre)** held by Highlands Equity Investments LLC under one folio (50-42-15-01-0711). The survey shows the historical lot lines of the three parcels that were combined, and the three existing 1959 era buildings on the site are the “three commercial assets” in the current listing.

It holds **275 feet** of frontage on South Andrews Avenue and **170 feet** on SW 9th Street, a true corner with visibility in both directions. **Florence C. Hardy Park sits directly to the north**, which means open space, light and air on that edge that no future neighbor can build out.

The existing buildings (Marty’s Bar & Grill and two others) are an interim use. The appraiser and the market both treat this as a redevelopment site; the improvements are expected to be cleared.

Top: the site on South Andrews with the downtown skyline behind it.
Lower left: the SW 9th Street corner. Lower right: the open site looking toward Hardy Park.

3 parcels ONE OWNER, ONE FOLIO	275 / 170 ft ANDREWS / SW 9TH FRONTAGE	Park HARDY PARK TO NORTH	Zone AE FLOOD (DESIGN FACTOR)
--	---	------------------------------------	---

Location and access

LINKAGE	DISTANCE	WHY IT MATTERS HERE
Fort Lauderdale-Hollywood International (FLL)	2.8 mi	Core driver for a rental fleet hub: airport proximity without airport land cost.
Downtown core / Las Olas	~10 min walk	Demand for the retail, office and hotel components of the wrap.
Brightline / Amtrak station	1.8 mi	Rail travelers are rental customers; transit-adjacency supports the RAC density.
I-95 on-ramp	1.5 mi	Fast fleet distribution north and south.

FLOOD NOTE, NOT A FLAW

The entire site is in FEMA Zone AE. For most uses that adds insurance and a raised ground floor. For a parking structure it is close to ideal: the fleet lives on elevated decks above the base flood elevation, and only the ground floor liner needs flood resistant detailing. The constraint and the use line up.

READING THE CODE AS YOUR LAND-USE COUNSEL WOULD

Zoning & entitlement

The site is in **RAC-RPO**, the Regional Activity Center, Residential and Professional Office district, inside the South Regional Activity Center along South Andrews. The district is written to bring an active, walkable, mixed-use form to this corridor while protecting the neighborhood behind it. That intent shapes everything the City will ask for.

STANDARD	RAC-RPO	WHAT IT MEANS FOR THIS PROJECT
Permitted uses	Retail, restaurant, office, hotel/motel, housing (single & multi), shopping centers, gas station, public service	Retail, office, hotel and residential are all by-right uses. Auto-oriented use is contemplated (gas station is listed).
Maximum height	Up to 12 stories	The nine story concept is within the ceiling. No rezoning is required to reach nine floors.
Height review trigger	Above 6 stories: enhanced (Level III) site plan & design review	Floors 7 to 9 are a discretionary approval, not a prohibition. This is the main process item.
Density	50 dwelling units / net acre	Up to ~43 residential units if a housing component is included (Scenario B).
Parking	1 stall / 250 SF (office & retail)	The garage vastly exceeds what the building needs; surplus stalls are the income/fleet product.
FAR / envelope	Form-based (height + build-to + setback)	No single hard ratio; the envelope is driven by the height ladder and street build-to. Confirm exact figures at pre-application.

The one real question: the use

Height is not the obstacle here; **use is**. A standalone commercial parking garage with a vehicle rental fleet is not an enumerated principal use in RAC-RPO. The pathway is to build a **permitted mixed-use building**, retail and restaurant at the street, office or hotel or residential above, with the rental counter as a permitted retail and service tenant and the fleet held in **accessory structured parking** that serves the building. The parking and the rental operation become components of a code-compliant project rather than the project itself.

STEP 1 Pre-application Sit with Planning & Urban Design before any offer contingency expires. Confirm the use structure, the build-to line and the above-6-story path.	STEP 2 Site plan, Level III Design review for the 7 to 9 story height, ground floor activation, and the garage screening. Where the discretion lives.	STEP 3 Permit & build Flood-resistant ground floor, structured decks above BFE. CBS / Type III construction, standard for South Florida.
---	--	---

No rezoning or land-use amendment is anticipated for height. The work is a discretionary site plan plus the use structuring above. Timelines and conditions are confirmed at the pre-application meeting; nothing in this report is a substitute for that meeting or for counsel.

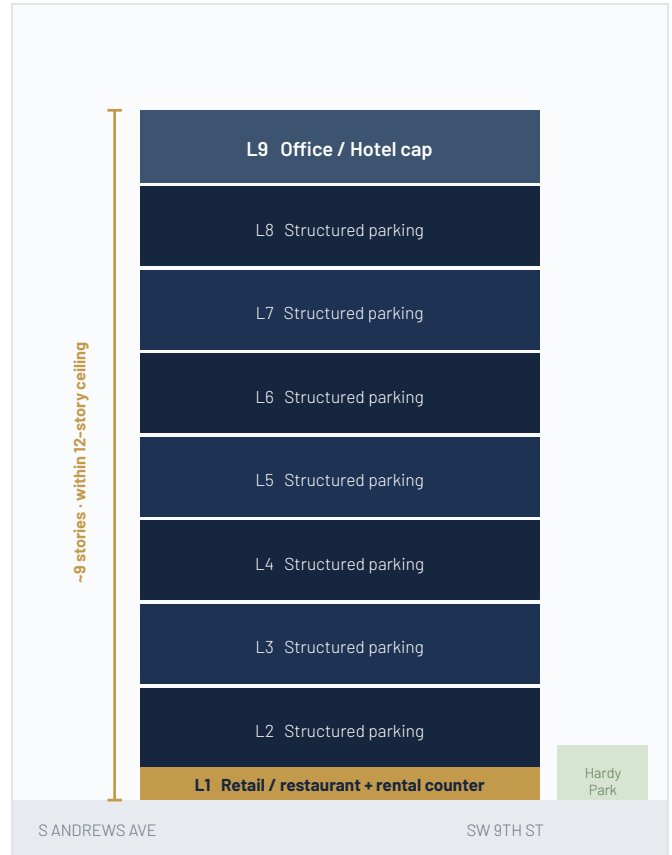

HOW NINE STORIES STACK ON THIS CORNER

Massing study

On a 38,207 SF corner, an efficient structured floor plate is roughly **28,000 SF** after the street build-to, the liner depth, cores and ramps. At about 340 SF per stall that is near **82 stalls per level**. Stacking seven parking levels between an active ground floor and an office or hotel cap is what produces the fleet capacity the buyer wants.

The diagram at right is the recommended **Mobility Hub** section: a lined, activated base on South Andrews, the fleet decks screened above, and a workplace floor on top with the skyline and Hardy Park views the site already has.

- ◆ **Active base** on Andrews satisfies the City's ground floor requirement and hides the garage.
- ◆ **Fleet decks** sit above the base flood elevation, an advantage in Zone AE.
- ◆ **Office or hotel cap** gives the building a permitted principal use and an income story.

Recommended Mobility Hub section, looking west. Preliminary; not a construction drawing. Floor count and plate verified at pre-application.

Recommended program, Scenario A • Mobility Hub

LEVEL	USE	APPROX. SF	STALLS / OUTPUT
L1	Retail / restaurant liner + rental showroom & counter + lobby	9,500	ground staging
L2-L8	Structured parking (fleet + public)	196,000	~575 stalls
L9	Office (buyer HQ + lease)	24,000	workplace
Total	Mixed-use mobility hub	~229,500	~600 fleet capacity

Figures are preliminary planning estimates for discussion, not an architect's area takeoff. Final counts depend on the build-to line, ramp geometry and the City's design conditions.

THREE WAYS TO MAKE IT WORK

Development scenarios

The City will want more than a parking box; an income and activity story makes the approval and the economics both easier. Three combinations, each at nine stories, trade fleet capacity against entitlement ease and income diversity.

SCENARIO	PROGRAM	PARKING	OTHER	BEST FOR
A. Mobility Hub	Retail base + 7 parking levels + office cap	~575 stalls	~24K SF office	Maximum fleet; the buyer's core business
B. Mixed-Use + Residential	Retail base + 3 parking levels + 5 residential	~245 stalls	~43 units	Easiest approval; best exit optionality
C. Hotel + Mobility	Retail base + 4 parking levels + 4 hotel	~330 stalls	~130 keys	Permitted use + rental / travel synergy

SCENARIO A

Mobility Hub

Roughly 575 to 600 structured stalls for the rental fleet, a leasable office or HQ floor on top, and an activated ground floor. The most fleet per dollar, and the closest match to why the buyer wants the site. Carries the heaviest entitlement lift because the parking and rental use must be structured carefully.

SCENARIO B

Mixed-Use + Residential

Up to 43 apartments over three parking levels and a retail base. This is the cleanest fit with the RAC intent and the simplest path through Planning, and it adds a for-sale or rental exit the others do not have. Fleet capacity is smaller, around 120 to 160 stalls after residents.

SCENARIO C

Hotel + Mobility

A roughly 130 key hotel over four parking levels. Hotel is an expressly permitted use, and a rental counter in a hotel lobby is a natural pairing for airport and Brightline travelers. Balances income, fleet and a clean use story.

THE POINT OF THE MENU

All three are buildable at nine stories under the current zoning. The buyer can lead with the fleet (A), de-risk the approval (B), or add a hospitality income stream (C), and can blend them. **None requires a rezoning.** What changes between them is how much of the building is fleet versus income, and how hard the approval is.

ANSWERED BEFORE THEY ASK

What the City will require

A buyer's biggest fear with a site like this is the unknown at City Hall. Here are the questions Planning & Urban Design will almost certainly raise, and how each is handled inside the program above.

THE CITY WILL WANT...	HOW THIS PROJECT ANSWERS IT
An active ground floor, not a blank garage wall	Every scenario lines South Andrews with retail, restaurant and the rental showroom. The parking is wrapped and screened, so the street reads as a building, not a deck. This is the single most important design condition, and it is designed in from the start.
The parking and rental use to fit the code	Structured as accessory parking to a permitted principal use (office, hotel or residential) with the rental counter as a retail/service tenant. The use is accommodated through the building rather than as a standalone garage.
Justification for floors 7 to 9	Within the 12 story ceiling, so the ask is design review, not a variance. The Hardy Park frontage to the north gives a clean transition and a strong urban-design argument for the height.
Flood-resilient design	Zone AE handled by elevating habitable and ground uses above BFE and putting the fleet on decks above grade. The use and the flood requirement reinforce each other.
Traffic and circulation	Corner site with two frontages (Andrews + SW 9th) allows separated entry and exit and keeps fleet movement off the primary frontage. A traffic statement will be part of the site plan.
Consistency with the South Andrews / SRAC plan	The corridor plan calls for an active, walkable, mixed-use street. A lined, ground-activated mixed-use building is squarely on plan; a bare garage would not be.

THE HONEST READ

This is a discretionary, design-driven approval, not a by-right permit and not a long-shot rezoning. The height is allowed, the uses are allowed, and the conditions above are knowable and manageable. The right move is a **pre-application meeting with the City during the inspection period**, so the buyer offers with the pathway confirmed rather than assumed.

WHAT THE LAND IS WORTH TO THIS BUYER

Valuation & recommended offer

The seller’s September 2025 lender appraisal concluded **\$11,100,000** (\$290.50 per land SF), and the property was previously listed at \$12,000,000. Read closely, the comps that produced that number argue for a lower price for this buyer, not a higher one.

COMP	LAND SF	PRICE	\$/SF	WHY IT SITS ABOVE THIS SITE
1404 S Andrews	10,499	\$2,375,000	\$226	Tiny lot; hospital assemblage bought under a condemnation threat, “slightly above market”
1408 S Andrews	6,970	\$2,100,000	\$301	Tiny lot; same coerced hospital assemblage
250 W Broward Blvd	47,045	\$31,242,000	\$664	Superior RAC-CC downtown zoning; 49 story, 381 unit tower
11 N Andrews	26,572	\$8,000,000	\$301	Superior RAC-CC downtown zoning; 316 units
Subject (this site)	38,207	\$8,000,000	~\$209	Larger, RAC-RPO, AE flood, parking-led program

The buyer-side adjustments

- ◆ **Size.** At 38,207 SF this corner is four to five times the closest comps. Larger land sells for less per foot; the appraisal itself concedes the small-lot premium.
- ◆ **Transaction character.** The two closest comps were a hospital district buying specific parcels under a condemnation threat, above market, not arm’s length.
- ◆ **Zoning.** The two priciest comps carry superior RAC-CC tower entitlements. This site is RAC-RPO.
- ◆ **Flood, demolition, entitlement.** Zone AE insurance, clearing three buildings, and a discretionary above-6-story approval all weigh on land value.
- ◆ **Program economics.** A parking and rental hub produces less residual land value than the residential towers underwriting the high comps. A rational buyer prices the land off the program it can actually build.

RECOMMENDED OPENING OFFER

\$8,000,000

\$209 per land SF. Disciplined entry with realistic room to roughly **\$8.75M**. Defensible market-clearing range: **\$7.65M to \$9.0M** (\$200 to \$235/SF).

At \$8.0M, land is roughly 16 percent of a \$45M to \$50M project, versus about 22 percent at the seller’s \$11.1M. That swing is the difference between a program that pencils and one that strains. The offer is low against the appraisal because the appraisal is a seller’s read built on inflated small-lot and superior-zoning comps.

FROM STUDY TO OFFER

Recommendation & next steps

This corner does what very few South Andrews sites can: it gives a rental operator the land to build vertically, in a district that already allows the height, ten minutes from downtown and under three miles from the airport. The development thesis is sound and the path is walkable.

STEP	ACTION
1. Offer	Open at \$8.0M with an inspection / feasibility period long enough to reach the City. Anchor the number to the comps and the program, not the seller's appraisal.
2. Pre-application	Meet Planning & Urban Design during feasibility to confirm the use structure, the build-to line, and the above-6-story path. This converts the report's thesis into the City's own words.
3. Diligence	Obtain and review the existing Phase I and Phase II environmental reports, the survey, and a preliminary civil / flood review.
4. Test fit	Commission a one page architect test fit of the chosen scenario to firm up stall counts and the envelope before hard money.

BOTTOM LINE

The height works, the uses work, and the City's likely conditions are answered above. At **\$8.0M** the buyer controls a scarce, airport-adjacent downtown corner with a clear nine story program and room in the basis to execute. The recommendation is to move, with a feasibility period that puts the City meeting before the money goes hard.

This report is a preliminary feasibility and valuation study prepared for the buyer's internal use. It is not an appraisal, a zoning determination, a permit, a survey, or legal advice, and it does not bind the City of Fort Lauderdale or any party. Zoning standards, height review, density, setbacks and use approvals must be confirmed with the City at a pre-application meeting and with qualified land-use counsel and a licensed architect. Square footages, stall counts, costs and values are planning-level estimates for discussion. Buyer should independently verify all facts, including environmental, flood, title and survey matters, during a feasibility period. Sources: AEI appraisal dated September 25, 2025; Broward County Property Appraiser; City of Fort Lauderdale ULDR Section 47-13; South Andrews Avenue / SRAC master plan.
